Wireless for Communities (W4C) is an initiative that utilises unlicensed spectrum and low-cost Wi-Fi based equipment to connect and empower rural and underserved communities in India. This map shows the W4C network, spread across the country.

Other Partners:
The project

- Enable greater access to training for communities
- Deliver new programs to organise training for communities
- Build a network to exchange culture and educational resources
- Promote access to essential government and educational resources
- Increase awareness and support for initiatives of wireless networks
- Improve socio-economic barriers through a bottom-up approach
- Expand the infrastructure in rural areas of the country
- Develop the availability of educational resources

The training

To expand wireless networks, it is crucial to create community-owned and community-operated projects. By providing affordable and innovative solutions to address the challenges of poor communication, wireless networks in rural areas are expected to boost economic growth and community development.

Wireless for Communities is an initiative of the Internet Society.
